

May 24th, 2017 Patch Notes

Instances

1. Greedy Bandits have infiltrated some Archdaeva instances.

- There is a random chance that one of four bandits may spawn in the following instances:

Instances	
Archives of Eternity	Cradle of Eternity

Fallen Poeta	Drakenseer's Lair
Adma's Fall	Theobomos Test Chamber

- Upon killing the bandit, they will drop a bag of treasure for each group member that will open immediately upon pickup. The type of treasure is specific to the type of bandit that was killed.

2. Instance difficulty has been eased on the following Archdaeva instances.

- Player characters will deal more damage and receive less damage.

Instances	
Archives of Eternity	
Fallen Poeta	Drakenseer's Lair
Adma's Fall	Theobomos Test Chamber

Quests

1. New repeatable quests have been added for Archdaeva instances. They can be obtained from Bobonerk in the capital cities and Iluma/Norsvold, and give large amounts of experience when completed.

Characters

1. It is now possible to save and load character appearances.

- When at the character creation screen, click the new “Save” button in the lower left corner to create a specially-formatted screenshot that has character data. This can also be done in-game by pressing Ctrl + Print Screen, which will save data for the character you are currently playing as.

- Character appearance screenshots will be saved to the Screenshot folder by default, with “AionCustomize####” as the name – for example, “AionCustomize0001.jpg.” To set a new save path, click the “Path” button.

- To load an appearance, click the “Appearance” tab on the left of the Character Customization screen to view eligible screenshots. This can also be done when using Plastic Surgery Tickets and Gender Switch Tickets.

NOTE: Any kind of editing of the screenshot file runs the risk of corrupting the character appearance data, which will render the screenshot unusable.

NOTE: These files can be shared and will work as long as they are unedited. Please exercise appropriate caution when receiving files over the Internet from unknown sources.

Prestige Pack

1. Prestige Pack monthly bonus bundles have had their Ceramium Medals exchanged with Spinel Medals.

Others

1. Added a Siege graphics optimization setting and hotkey.

- If you are experiencing performance issues during periods of intense gameplay (such as during sieges), this setting can be used to improve performance. With one click, it will set graphics to the lowest options. It can be found in Options → Graphics Options → Siege Optimization.

- A hotkey setting has been added (default Shift + F11) under Key Mapping → Functions → Additional Functions, which will toggle this setting on or off.

- When turning the setting on or off, you may experience a momentary slowdown while the graphics engine adjusts.
